BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                residue sequence Pro-Asp-Gly-Arg which constitutes residues 36-35 basic FGF; it is also antagonistic to acidic FGF. The antagonist modulates growth of epithelial (and related) cells and can be use diagnostically or therappeutically, eg to treat proliferative diseases of eyes and kidneys, some types of tumours and adrenal vascularisation. It is able to bind with heparin or with the FGF
                                                                                                                                                                                                                                                                                                                               Synthetic
                                                                                                                                                                                                                                                                                                                                                 Bovine; basic fibroblast growth factor; antagonist; mitogen; melanoma; glomerulonephritis; retinopathy.
                                                                                                                                                                                                                                                                                                                                                                                                       05-MAY-1994
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                The peptide bFGF(24-68)-NH2 (100mcg/ml) radioactive bFGF bound to the BHK cells affinity to bind heparin.
                                                                                                                                                                                                                                                                    US5252718-A
                                                                                                                                                                                                                                                                                                                                                                                  FGF antagonist
                                                                                                                                                                                                                                                                                                                                                                                                                           R43278
                                                                                                                                                                                                                                                                                                                                                                                                                                              R43278 standard;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    P81933
                      Using plasmid pTB796, E.coli MM294 was transformed, whereby the CC strain E.coli MM294/pTB796 was obtained, which (IFO 14701, FERM BP-1661; CC harbors the plasmid pTB796 expressing the mutein represented here. CC The amino acid sequence Lys 87 to Ser 147 has been deleted. The mutein has high stability and is low in toxicity.

CC It can be used as a healing accelerator for e.g. burns, wounds CC It can be used as a healing accelerator for e.g. burns, wounds CC angiogenic action for e.g. thrombosis or arteriosclerosis. It can also be used as a reagent for acceleration of cell cultivation. A mutein CC where at least one constituent cysteine is replaced by serine is C preferred because the mutein is highly stable and intermolecular bridges and linkages are reduced or eliminated.

CC See also N81971-97.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human basic fibroblast growth factor; human bFGF mutein C86; growth promoting activity; growth stimulating activity; phage M13-PC86; capillary endothelial cells; angiogenic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Key

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                22-APR-1986;
14-NOV-1988;
27-APR-1992;
                                                                                                                                                                                                                                                                                                                                   Peptides having the sequence of amino acids 93-135 of bFGF (R43274) or C-terminally truncated fragments which contain the sequence YRSRXYSSWY are claimed. The peptides are FGF antagonists and can be used to regulate cell growth and proliferative diseases.

N.B. the sequence given in Claim 1 and assigned GENESEO Accession No. R43275 includes an additional Tyr residue between Tyr115 and Vall16; this residue does not, however, appear in any of the peptides "according to Claim 1" (see Features Table in R43274).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New fibroblast growth factor peptide(s) - are FGF antagonists used to inhibit cell growth in culture or in disease e.g. retinopathy, glomerulonephritis, melanoma etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Synthetic

                                                                                                                                                                                                        The peptide is a bovine basic fibroblast growth factor. Truncated analogues of this peptide (esp. comprising residues 24-68) can be used as bpgr antagonists, and can therefore interact or inhibit the peptide analogues can be used in human and other call growth. The diagnosing and treating vasoproliferative diseases of the eye (e.g. chondrosarcoma), adrenal vascularisation and to inhibit umours neovascularisation of solid tumours. The peptide analogue should other call of the eye (e.g. chondrosarcoma), adrenal vascularisation and to inhibit also be effective in combating the growth of human melanomas and oncogenes such as hst/K53. See also R25944-5.

                                                                                                                                                                                                                                                                                                                                         FGF may be synthesised using recombinant DNA techniques (see also Q29741). This peptide is biologically active and exhibits either no or random disulphide bonding within the molecule. This protein, an analogue, a biologically active fragment, or a non-toxic salt of it may be used in a pharmaceutical composition for diagnostic or therapeutic uses. This may be used in in vitro cell proliferation procedures, eg. nerve regeneration and wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                             This substantially pure protein was purified from partially purified basic fibroblast growth factor (FGF) by cation exchange HPLC and two reverse-phase HPLC steps. Having purified this protein to apparent homogeneity the amino acid sequence can be determined and pure basic

The published AA sequence of bovine basic FGF was used as a basis for the synthesis of mfd. bFGF gene for expression in E. coli. The nucleotide sequence of this mfd. gene includes codons most often used by E. coli and the inclusion of convenient restriction sites. Oligonucleotides corresp. to both strands of the gene were synthesized in overlapping sections and assembled into 2 larger sections by hybridation and subsequent ligation. The 2 larger sections were then cloned into an approp. phage vector (M13mp18) for nucleotide sequence analysis. The sections were then
                                                                                                                                                                                                                                                                                                   DNA encoding human basic fibroblast growth factor used for expression in an E coli host with purification using non-heparin contg. chromatographic column
                                                                                                                                                                                                                                                                    Example; Fig 2; 21pp; English.

The invention relates to a unit dose composition (I) for inducing angiogenesis in a human, comprising 0.008-7.2 mg of composition (I) and recombinant FGF-2 are useful for treating coronary FGF-2 may be used to treat unstable angina and acute myocardial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       100 snnyntyrsrkysswyvalkr 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ligated into an expression vector and introduced into E. coli. Bovine and human basic FGF are known to differ by only two AAs. Site directed mutagenesis was used to convert the bovine gene into one coding for the human FGF (see FT). The FGF is a potent mitogen for a wide variety of eclls of mesodermal origin and may be chemotactic for endothelial cells and fibroblasts. The basic FGF induces neovascularisation and may be

Isolated sequences are used in vector construction etc. and used to transform CV-1 cells for FGF prodn.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Key

                                                                                                                                                                                                                                                                            W20029 is a recombinant bovine basic fibroblast growth factor (bFGF). Recombinant bFGF is used to promote healing of wounds, bone fractures, damaged myocardial tissue etc. and, since it increases neuronal survival and promotes neurite outgrowth, may also be used in treatment of neurological disorders such as Alzheimer's and Parkinson's diseases. bFGF may also be used for detection of specific inhibitors; for treatment of cell cultures in vitro before transplant and for inducing release of tissue plasminogen activator or collagenase, e.g. for treatment of a chronic tendency to form embolism. Recombinant bFGF can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New high purity, recombinant human basic fibroblast growth factor for promoting wound healing and treating neuro:degenerative diseases, suitable for production on large scale
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            12-SEP-1985;

CC capillary permeability. The method is also useful in treating CC disorders related to abnormal transport of solutes across endothelial CC cells. Such disorders include the treatment or prevention of kidney CC disease associated with impaired filtration or excretion of solutes; CC the treatment or prevention of diseases of the central nervous system associated with alterations in cerebrospinal fluid, e.g. stroke, CC meningitis, tumour, infections, and bone growth disorders; treatment CC or prevention of hypoxia or hypercapnia or fibrosis arising from CC accumulation of fluid secretions in the lungs, arising from CC surgical intervention, cystic fibrosis; treatment or prevention of CC pulmonary dysfunction arising from injury, pneumonia, infections, CC surgical intervention, cystic fibrosis; treatment or prevention of CC endothelium, including disorders arising from premature birth, and pulmonary hypertension; treatment or prevention of disease arising CC from disordered transport of fluid and solutes across the intestinal CC epithelium, e.g. inflammatory bowel disease, diarrhoae; treatment or crepticacy of solute flux; preservation or enhancement of function of corgan allografts; and treatment or or enhancement of function of corgan allografts; and treatment of cardiac valve disease. This cative human vascular endothelial growth factor hyperilic receptors on target tissues, most notably the vascular endothelium. VGEF exists as five different length monomer chains due to alternative splicing of the VGEF RNA transcript.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match 89.5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The two forms of VEFG (Q10797 and Q10917) which arise through different message splicing, have different properties. In partic. Or hyberl21 does not bind to heparin leaving more of the protein free to bind to VEGF receptor and increase the half-life and distribution of the protein in circulation, whereas hBEGF165 blands heparin strongly. The product can be used for angiogenesis and re-endothelialisation of inner vascular surfaces in wound healing, e.g. treatment of full-thickness wounds such as dermal ulcers, venous ulcers and diabetic ulcers, burns, in surgery, in balloon angioplasty and for the in CC vitro culturing of endothelial cells. Hybrid growth factors of PDF and VEGF can exhibit a mitogenic profile between each factor and CC can be used for wound healing or as inhibitors of angiogenesis for CC vEGF analogues in which CYS residues are substd. are more stable. See also Q10791-93; Q10796-97; Q10806-08 and Q11099.

The vaccine can be used for treating cancers, glaucoma, eye tumours, reachoma, psoriasis, granuloma, hypertrophic scars, post-crystalline fibrosis and senile disk muscular degeneration. A preferred protein for use in the vaccine is human VEGF/VPF121, i.e. the present sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        W09091 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence of Q44260 contains an open reading frame corresponding to the 165 amino acid human vascular endothelial cell growth factor (hVEGF-165, see R38921). Alternative splicing of the sequence gives a shorter coding sequence which encodes the 121 amino acid hVEGF (see R42507). The full-length coding sequences be generated using PCR with human foetal vascular smooth muscle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 3;

Several VPF types are known having 121, 165, 189 or 206 amino acids. This sequence was used to generate a series of overlapping peptides having 10 residues which w03678-9 generated the greatest antibody signal against the VPF protein. These clones were used to manufacture hybridomas producing monoclonal antibodies which are useful for diagnosis and treatment of cancers and

The monoclonal antibody of the invention (MVIOI) reacts with this hVPF sequence. MVIOI does not, however, react with a peptide composed of ten successive residues of this sequence starting from an odd number from the N-terminus of this sequence (e.g. residues 1-10, residues 5-14, residues 47-56 etc.). The antibody can be used for diagnosis and treatment of cancer and other diseases. When it is used as an anti-cancer agent, it is preferably in the form of a chimeric or humanised antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Vascular therapy;

                                                                                                                                                                          The patent discioses a vascularisation-controlling vaccine comprising a cell growth factor which specifically promotes growth of endothelial cells. The vaccine is typically used in immunotherapy to remedy diseases caused by vascularisation, such as solid tumours, and to control the onset and recurrence of such diseases. Typical growth factors include vascular permeability factor (VPGF) and vascular endothelial growth factor (VEGF). The present sequence is that of human VEGF/VPF121.
                                                                                                                                               Sequence

                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents vascular endothelial growth factor (VEGF) 121. The specification describes a monoclonal antibody which is specific to VEGF 121, and a hybridoma producing this antibody. The antibody is used in a method for measuring the amount of VEGF 121 present in a sample.

В Š

This represents a vascular endothelial growth factor-145 (VEGF145) which can be used to stimulate vascular cell proliferation. Polynucleotides encoding VEGF145 are useful for treatment of cardiovascular or vascular disease in mammals, especially humans. They are also useful for enhancing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes the novel preparation of biologically active dimers of recombinant human growth factors of the cysteine knot family starting from cellular inclusion bodies. Such dimers are are useful in pharmaceutical compositions and the method provides yields of 31-39.7%, in examples, compared with about 10% for the conventional method (see Biochemistry, 28 (1989) 2956). Y08278-Y08301 are human growth factor protein fragments used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                    W56693 standard; Protein;

drug permeation by tumours. VEGF145 can also be administered to stimulate vascular cell proliferation or to enhance endothelialization of diseased vessels (especially re-endothelialization after angioplasty) in mammals. VEGF145, which binds as weakly as VEGF165 to heparin, binds much better than VEGF165 to the extracellular matrix (ECM). However, unlike VEGF189, VEGF145 is secreted from producer cells and binds efficiently to ECM. This combination of properties render VEGF145 the only known VEGF variant that is secreted from producing cells retaining at the same time ECM binding properties. This makes VEGF145 likely to diffuse towards the target blood vessels, while some of the produced VEGF145 will be retained by ECM components along the path of diffusion. This ECM bound pool will clissociate slowly allowing a longer period of activity. Additionally, the biological activity of VEGF145 is protected against oxidative damage unlike VEGF forms such as VEGF121 thereby giving it a longer half-life.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

yield
This invention describes the novel preparation of biologically active dimers of recombinant human growth factors of the cysteine knot family starting from cellular inclusion bodies. Such dimers are are useful in pharmaceutical compositions and the method provides yields of 31-39.7%, in examples, compared with about 10% for the conventional method (see Biochemistry, 28 (1989) 2955). V08278 v70830l are human growth factor protein fragments used in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Š
                The present sequence represents native human vascular endothelial growth factor (VEGF) 145. VEGF is an angiogenic factor. VEGF proteins are used for the prevention or repair of injury to blood vessels or associated convascular tissues (served by the blood vessels) and for the prevention and repair of vascular injury associated with microvascular angiopathy, and repair of vascular injury associated with microvascular angiopathy, associated with injury to, or atrophy of, the vasculature of the glomerulus and contensitium. Conditions which may be treated include haemolytic uremic syndrome, toxic shock syndrome, venom exposure, chemical exposure, thrombosis, precelampsia, thrombotic thrombocytopenia purpura, disseminated conformation, ischemic bowel disease, acute renal failure, conformation, ischemic bowel disease, transient ischemic condition, ischemic bowel disease, transient ischemic condition, ischemic bowel disease, transient ischemic condition, ischemic bowel disease, transient ischemic condition injury, acute respiratory distress syndrome, toxic alveolar conditions, appearance of the providers of the provid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Local Similarity 100 Matches 15; Conservative

        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC growth factors (VEGF) exons. This sequence represent vascular endothelial CC sequences were used in VEGF conjugates of the invention. In the CC conjugates, VEGF (or fragments of it) are linked to a targeted agent VEGF receptor. Cys-modified forms of VEGF are particularly suitable for CC chemical conjugation to linkers and targeted agents. The conjugates are cc used for inhibiting proliferation of cells bearing VEGF receptors. They circluding dermatological disorders with underlying vascular cc including dermatological disorders with underlying vascular cc proliferation, solid tumours or an ophthalmic disorder of themselved humour. The conjugates can be used for treating blood vessels of the retina, iris, conjunctiva or rheumatoid arthritis, skin cancers and other tumours, or varicose veins.
            Isolated DNA sequences, expression vectors and transformant cells used for large scale prodn. of vascular endothelial cell growth factor, for treating wounds in which neo-vascularisation is

The present sequence represents native human vascular endothelial g factor (VEGF) 110. VEGF is an angiogenic factor. VEGF proteins are for the prevention or repair of injury to blood vessels or associate nonvascular tissues (served by the blood vessels) and for the preve and repair of vascular injury associated with microvascular angiopa
                                                                                               Disclosure; Fig 12; 46pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequences of the 8 possible exons encoding human vascular endothelial cell growth factor, together with contiguous splice junctions, were obtained from overlapping genomic inserts. A method for producing VEGF is claimed comprising culturing mammalian cells transformed with an expression vector containing exons I-V and VIII. See Q44261 for exon I and Q49604-Q49610 for exons II-VIII.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  48 cndeglecvptee 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             particularly thrombotic microangiopathy. The proteins methods may also be used for the prevention and treatment of kidney diseases associated with injury to, or atrophy of, the vasculature of the glomerulus and interstitium. Conditions which may be treated include haemolytic uremic syndrome, toxic shock syndrome, venom exposure, chemical exposure, preeclampsia, thrombotic thrombotytopenia purpura, disseminated intravascular coagulation, sepsis, pancreatis, acute renal failure, myocardial infarction, ischemic bowel disease, transient ischemic attacks, stroke, hypoxia or hypercapal or fibrosis arising from lung endothelium injury, acute respiratory distress syndrome, toxic alveolar injury, pneumonia, pulmonary emboli, birth prematurity disorders, wounds, allergic reactions, hypersensitivity, autoimmune diseases, organ transiants focal almorations or supercapia and amyloidesis.
Administering vascular endothelial growth factor (VGEF) can be used for treating hypertension (especially salt-dependent hypertension) Administration of VGEF promotes angiogenesis and/or vascular or capillary permeability. The method is also useful in treating disorders related to abnormal transport of solutes across endothelial cells. Such disorders include the treatment or prevention of kidney disease associated with impaired filtration or excretion of solutes;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Vascular endothelial growth factor; human; angiogenesis; VGEF; capillary formation; hypertension; treatment; kidney; CNS; stroke; meningitis; central nervous system; tumour; infection; bone growth; hypoxia; hypercapnia; fibrosis; inflammatory bowel disease;
                                                                                                                                                                        Novel methods for treating hypertension by administering a factor which increases angiogenesis and/or vascular permeability

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     the treatment or prevention of diseases of the central nervous system cc associated with alterations in cerebrospinal fluid, e.g. stroke, cmeningitis, tumour, infections, and bone growth disorders; treatment or prevention of hypoxia or hypercaphia or fibrosis arising from cc accumulation of fluid secretions in the lungs, e.g. acute respiratory conditress syndrome, toxic alveolar injury, pneumonia, infections, cc surgical intervention, cystic fibrosis; treatment or prevention of cc pulmonary dysfunction arising from injury to the pulmonary endothelium, including disorders arising from premature birth, and cc pulmonary hypertension; treatment or prevention of disease arising cf from disordered transport of fluid and solutes across the intestinal cc prevention of ascites accumulation in the peritoneum; enhancement of cc efficacy of solute flux; preservation or enhancement of function of corgan allografts; and treatment of cardiac valve disease. This cc sequence is the native human vascular endothelial growth cf factor hyperion. The activity of VGEF is mediated by interaction crendothelium. VGEF exists as five different length monomer chains due to alternative splicing of the VGEF RNA transcript.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

0

The two forms of VEFG (Q10797 and Q10917) which arise through different message splicing, have different properties. In pa hVEGF121 does not bind to heparin leaving more of the protein

properties. In par more of the protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                R42607 standard; Protein; 121 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            bind to VEGF receptor and increase the half-life and distribution of the protein in circulation, whereas habsgri65 binds heparin strongly. The product can be used for angiogenesis and re-endothelialisation of inner vascular surfaces in wound healing, e.g. treatment of full-thickness wounds such as dermal ulcers, venous ulcers and diabetic vitro culturing of endothelial cells. Hybrid growth factors of PDGF and VEGF can exhibit a mitogenic profile between each factor and e.g. preventing the growth of tumours.

**WEGF analogues in which CYS residues are substd. are more stable.**

**VEGF analogues in which CYS residues are substd. are more stable.**

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                to the 165 amino acid human vascular endothelial cell growth factor (hVEGF-165, see R38921). Alternative splicing of the sequence gives a shorter coding sequence which encodes the 121 amino acid hVEGF (see R42607). The full-length coding sequences be generated using PCR with human foetal vascular smooth muscle poly-A+ RNA as template.

                      Vascular therapy;
                                                                                                                                                                                                                                                                                                                                         (VPF), a member of the growth factor family. Several VPF types are known having 121, 165, 189 or 206 amino acids. This sequence was used to generate a series of overlapping peptides having 10 residues which were used to raise antibodies against the VPF peptide. The two peptides W03678-9 generated the greatest antibody signal against the VPF protein. These clones were used to manufacture hybridomas producing monoclonal antibodies which are useful for diagnosis and treatment of cancers and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the human vascular permeability factor (hVPF). The monoclonal antibody of the invention (WVI01) reacts with this hVPF sequence. WVI01 does not, however, react with a peptide composed of ten successive residues of this sequence starting from an odd number from the N-terminus of this sequence (e.g. residues 1-10, residues 5-14, residues 47-56 etc.). The antibody can be used for diagnosis and treatment of cancer and other diseases. When it is used as an anti-cancer agent, it is preferably in the form of a chimeric or humanised antibody.
The sequence represents VPF121. The patent relates to short peptides derived from this sequence (see R93978
                                                                Partial peptide(s) of VPF121 and anticancer agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Monoclonal antibody reacting with human vascular permeability factor - useful for treatment and diagnosis of cancer and other diseases
                                                                                                                                                             07-JUN-1994;
                                                                                                                                                                                        07-JUN-1994;
                                                                                                                                                                                                                   19-DEC-1995.
                                                                                                                                                                                                                                                                                                  anticancer.

The vaccine is typically used in immunotherapy to remedy diseases caused by vascularisation, such as solld tumours, and to control the onset and recurrence of such diseases. Typical growth factors include vascular permeability factor (VPF) and vascular endothelial growth factor (VEGF). The present sequence is that of human VEGF/VPF121.

The specification describes a monoclonal antibody which is specific to VEGF 121, and a hybridoma producing this antibody. The antibody is used in a method for measuring the amount of VEGF 121 present in a sample.

This represents a vascular endothelial growth factor-145 (VEGF145) which can be used to stimulate vascular cell proliferation. Polynucleotides encoding VEGF145 are useful for treatment of cardiovascular or vascular disease in mammals, especially humans. They are also useful for enhancing drug permeation by tumours. VEGF145 can also be administered to stimulate vascular cell proliferation or to enhance endothelialization of diseased vessels (especially re-endothelialization after angioplasty) in mammals. VEGF145, which binds as weakly as VEGF165 to heparin, binds much better
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes the novel preparation of biologically active dimers of recombinant human growth factors of the cysteine knot family starting from cellular inclusion bodies. Such dimers are are useful in pharmaceutical compositions and the method provides yields of 31-39.7%, in examples, compared with about 10% for the conventional method (see Biochemistry, 28 (1989) 2956). Y08278-Y08301 are human growth factor
                                                                                                                                                        Vascular endothelial growth factor-145 splice variant - useful as an angiogenic factor for treatment of cardiovascular disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homo
                                                                                                                                                                                                                                                                                                                   21-JAN-1997;

                                    This invention describes the novel preparation of biologically active dimers of recombinant human growth factors of the cysteine knot family starting from collular inclusion bodies. Such dimers are are useful in pharmaceutical compositions and the method provides yields of 31-39.7%, in examples, compared with about 10% for the conventional method (see Biochemistry, 23 (1989) 2956). Y08278-Y08301 are human growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                than VEGF165 to the extracellular matrix (ECM). However, unlike VEGF189, VEGF145 is secreted from producer cells and binds efficiently to ECM. This combination of properties render VEGF145 the only known VEGF variant that is secreted from producing cells retaining at the same time ECM binding properties. This makes VEGF145 likely to diffuse towards the target blood vessels, while some of the produced VEGF145 will be retained by ECM components along the path of diffusions ECM bound pool will dissociate slowly allowing a longer period of activity. Additionally, the biological activity of VEGF145 is protected against oxidative damage unlike VEGF forms such as VEGF121 thereby giving it a longer half-life.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DB seq length: 0

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC for treating hypertension (especially salt-dependent hypertension)
CC Administration of VGEF promotes angiogenesis and/or vascular or
CC capillary permeability. The method is also useful in treating
CC disorders related to abnormal transport of solutes across endothelial
CC disease associated with impaired filtration or prevention of kidney
CC disease associated with impaired filtration or prevention of solutes;
CC meningitis, tumour, infections in cerebrospinal fluid, e.g. stroke,
CC cor prevention of fluid secretions in the lungs, e.g. acute respiratory
CC distress syndrome, toxic alveolar injury, pneumonia, infections,
CC gulmonary dysfunction arising from injury, pneumonia, infections,
CC pulmonary dysfunction arising from injury to the pulmonary
CC cryptreading disorders arising from prevention of
CC pulmonary hypertension, treatment or prevention of
CC pulmonary hypertension, treatment or prevention of solutes accumulation of fluid and solutes across the intestinal
CC prevention of ascites accumulation in the peritoneum; enhancement of
CC efficacy of solute flux; preservation or enhancement of function of
CC corgan allografts; and treatment of cardiac valve disease. This
CC sequence is the native human vascular emothelial growth
CC endothelium. VGEF exists as five different length monomer chains due
CC endothelium. VGEF exists as five different length monomer chains due
CC to alternative splicing of the VGEF RNA transcript.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; Figure 11; 51pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The two forms of VEFG (Q10797 and Q10917) which arise through Cd different message splicing, have different properties. In partic. CC hVEGF121 does not bind to heparin leaving more of the protein free to bind to VEGF receptor and increase the half-life and distribution of the protein in circulation, whereas hBEGF165 binds heparin strongly. Crime product can be used for angiogenesis and re-endothelialisation of inner vascular surfaces in wound healing, e.g. treatment of full-crickness wounds such as dermal ulcers, venous ulcers and diabetic culcers, burns, in surgery, in balloon angioplasty and for the in culturing of endothelial cells. Hybrid growth factors of PDGF and VEGF can exhibit a mitogenic profile between each factor and cc can be used for wound healing or as inhibitors of angiogenesis for CC users preventing the growth of tumours.

CC VEGF analogues in which CYS residues are substd. are more stable.

CC VEGF analogues in which CYS residues are substd. are more stable.

Alternative splicing of the sequence gives a shorter coding sequence which encodes the 121 amino acid hVEGF (see R42607). The full-length coding sequences can

                                                                                                                                                                                                                                                            This is the amino acid sequence of the vascular permeability factor (VPF), a member of the growth factor family. Several VPF types are known having 121, 165, 189 or 206 amino acids. This sequence was used to generate a series of overlapping peptides having 10 residues which worse used to raise antibodies against the VPF peptide. The two peptides w03678-9 generated the greatest antibody signal against the VPF protein. These clones were used to manufacture hybridomas producing monoclonal antibodies which are useful for diagnosis and treatment of cancers and
                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; Page 10; 13pp; Japanese.

The vaccine can be used for treating cancers, glaucoma, eye tumours, trachoma, psoriasis, granuloma, hypertrophic scars, post-crystalline fibrosis and senile disk muscular degeneration. A preferred protein for use in the vaccine is human VEGF/VPF121,
